REMARKS			
25X1X			

1. The state-owned Motor Vehicle Repair Shop No. I, located on 45 Vaci ut., Budapest XIII, covered an area of about 150 x 250 meters and was housed in a modern building with glass roof. Before the plant was nationalized in late 1948, it had been owned by the Ford Company. No constructional changes were made after the war.
2. The production shops included the engine workshops, the fitting shop, the carpentry, the lathe shop, the test driving department; and a specially separated department for the repair and testing of engines for T-34 tanks.
3. In addition to the daily quota of repair work, the plant produced six new vehicles from old and salvaged 1.5-ton Dodge trucks. An increase of the output to eight trucks as of 1 July 1950 had the effect that 20 percent of the vehicles produced were defective. The entire output was turned over to the Hungarian Army Depot in Mátyásföld (Q 48/H 62) after each car had been subjected to a 500-kilometer road test. The department for tank engines had a monthly output of 8 to 10 engines.
4. The repair plant had a work force of about 1,000 persons, including 60 women. Work was done in one shift. Every six months, new work clothing was issued. There was no guard personnel in addition to the fire department and the night watchmen. The air-raid shelters had been repaired.

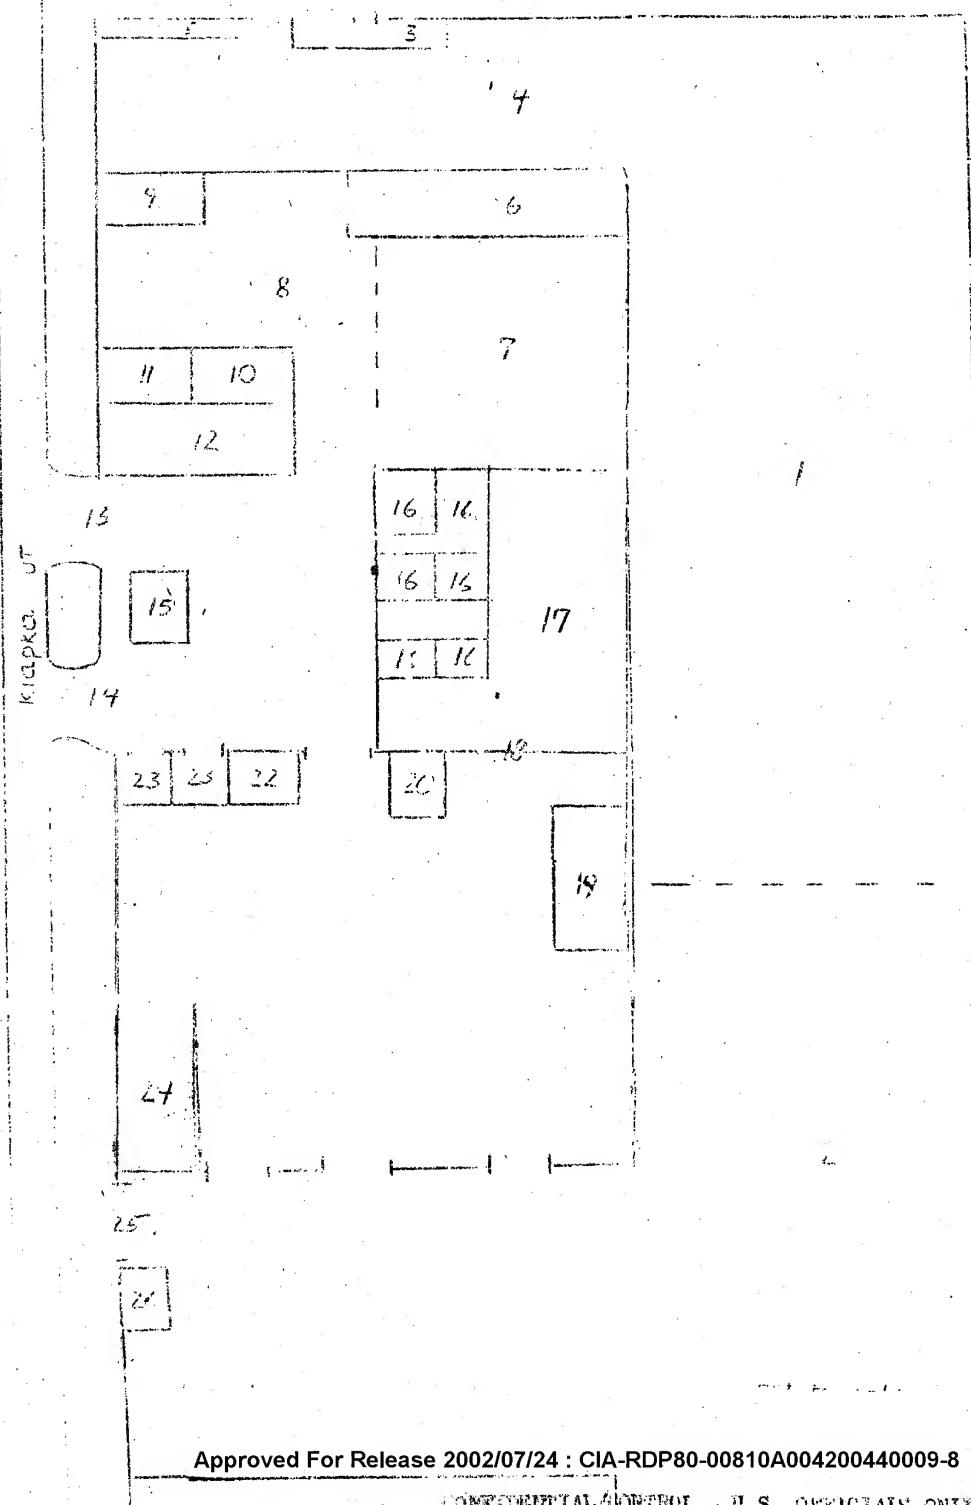

25X1A 1.  Comments. For a sketch of the plant layout, see Annex.
